

Aniset™ Foal/Calf STERILE

For the administration of fluids and medication to animals during recovery from dehydration, illness, injury, surgical procedure, exhaustive events, inspection and birth.

FEATURES & BENEFITS

- Provides a secure, extensible, anti-kink fluid path from the fluid source to the patient. With an overall length of 3.9m.
- Ideal for use in both surgery or during hospitalisation where the patient is free to move around the recovery stall.

- Provides a superior reach by an extensible re-coiling anti-kink fluid line for short or extended periods of infusion.
- Incorporates a superior 360° low friction swivel connector which allows totally free rotational movement of the patient around the recovery area without occlusion. This, combined with the Aniset™ Anti-Kink® tubing, safeguards occlusion of the re-coil tube which is often experienced with some inferior brands.

Anti-Kink®

IV INFUSION PUMP
COMPATIBLE

Sterile packed in a recyclable
Millpack™ pouch.

Anicath L/A™ Long-Term
Polyurethane IV Cannula.
